

**GYALA**  
Cyber security

La The Cyber  
Protection of your  
Company...  
**in your pocket**

Uranyo can **automatically** and **24/7** detect any type of cyber-attack thanks to the analysis of the behavioral anomalies of processes and network communications.

100% protection: from malware/ransomware through attacks to the most sophisticated attack attempts (Zero-Day Attack, Advanced Persistent Threat).

Artificial Intelligence Control

Uranyo implements real-time reactions, according to pre-selectable "automation levels".nabili.

Uranyo is the **“Made in Italy”** Cyber Protection solution for companies, that combines the most advanced algorithms of **military-derived artificial intelligence**, with maximum ease of installation and use.

# 1 Agent SW

S.O. supported:  
Microsoft (from XP on),  
Linux/Unix, macOS.

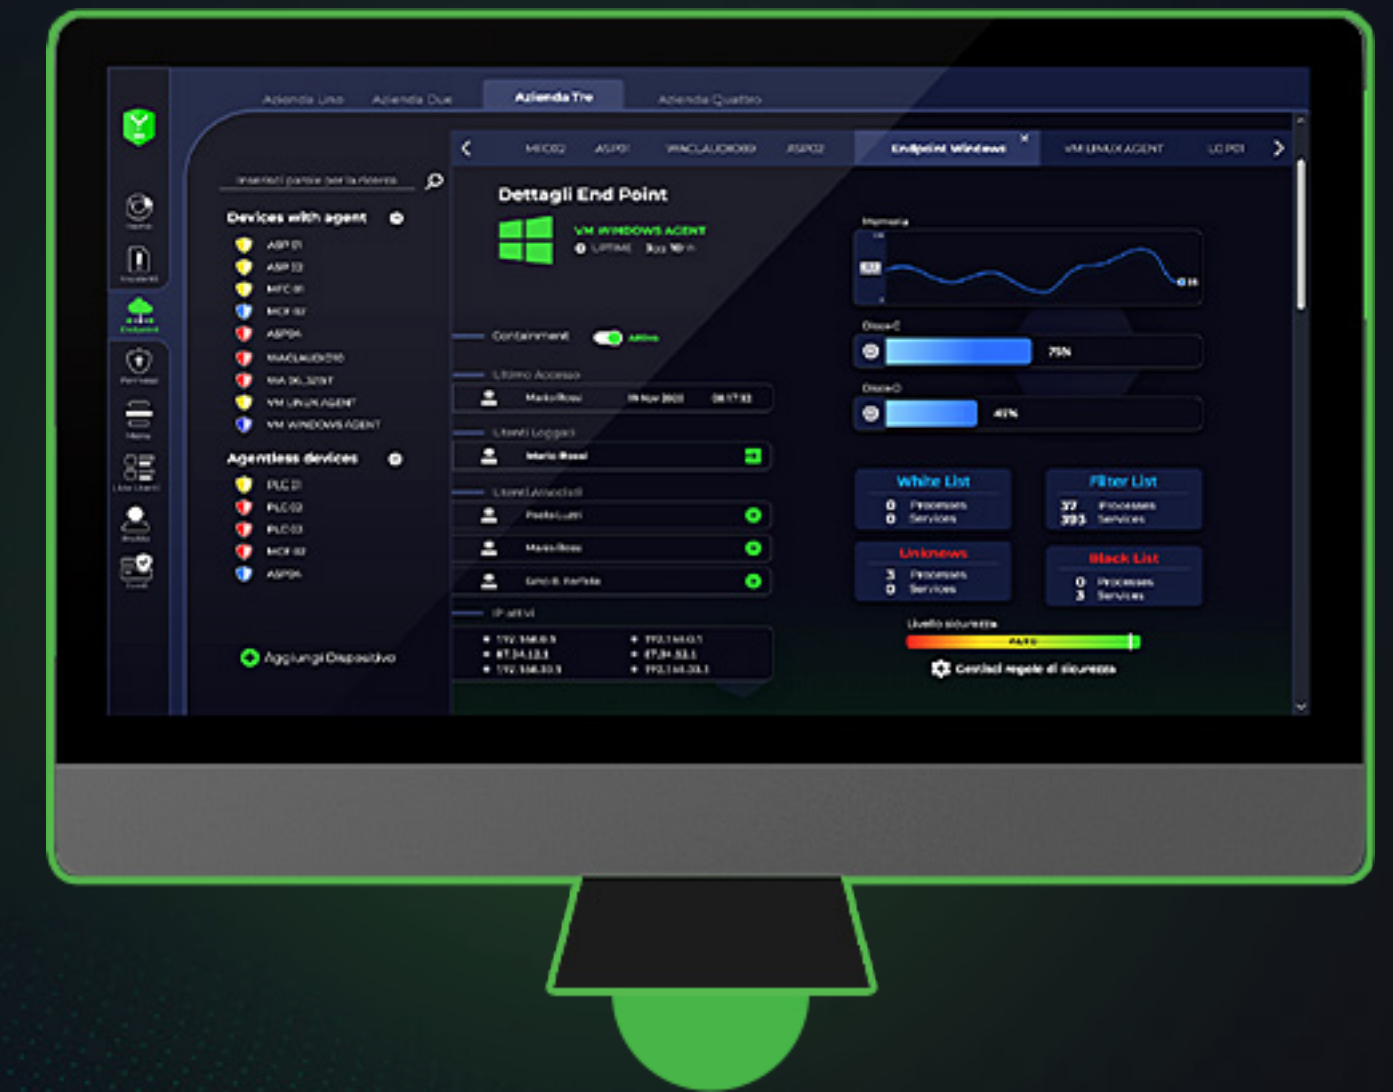

# 2 App Mobile

Available for  
Android and IOS.

# 3 Dashboard

The SW Agent, once installed **on each endpoint** to be protected (PC, Server,...), communicate with each other and autonomously learn the **"normal" behavior** of the infrastructure to be protected, both at individual process and network level .

Uranyo **continuously detects** any anomaly with respect to "normal" behavior and performs protection actions pre-selected during setup **in real-time**.

Each incident is notified to the user and administrator, via **app** and **dashboard**, according to pre-selectable customization levels.

The **Uranyo** app allows the administrator to have full control over the company's security, combining the main functions of the dashboard with the convenience of "mobile" management, particularly useful for companies that do not have Dashboard controlling staff.

# YOUR COMPANY'S **CYBER PROTECTION**...IN YOUR POCKET

Receiving notifications of each anomaly detected by the agents and the relative automatic action implemented by Uranyo.

Management of any anomalies for which an authorization to proceed was requested during the setup phase.

Authorisation/blocking attempts to use PC USB peripherals, on which restrictions have been pre-set.

Advanced analysis of the anomalies found, thanks to the Advanced Threat Intelligence features implemented in the Cloud component of Uranyo.

Remote segregation of a computer (Internet, Lan, Wan, VPN).

Simultaneous management of multiple locations/companies.

Log of notified anomalies/incidents, related status and remedial actions performed.

Immediate association between app and computer, via QR code.

## Unique benefits:

- Levels of protection not achievable with traditional antivirus, thanks to the implementation of features from EDR (Endpoint Detection and Response) and NSA (Network Security Appliance).
- Maximum protection against any threat (malware, Zero-Day Attack, Advanced Persistent Threat).
- Guided installation in 3 clicks.
- Made in Italy.
- Simplified management via app, with pre-selectable levels of automation, up to "100% automatic" operation.

## What is Gyala?

Gyala is the Italian tech company specialized in Cyber Security that makes the best of military research available to the national business ecosystem, with a portfolio of solutions dedicated to small, medium and large companies. Born in 2017 from the twenty years of experience in defense, information technology and security of the three founders, Gyala combines the "agile" approach typical of an innovative startup, with the consolidated know-how gained in the management of Cyber Protection projects of critical infrastructures, developed with various units of the Ministry of Defense and with the main national System Integrators.

### The solution portfolio:

Agger → Tailored projects for critical infrastructure

Uranyo → SMEs, Large Companies and PA

Agger is a project funded by the National Plan for Military Research (PNRM)
